

Stoltenberg Consulting Inc., a leading health care information technology consulting firm, solves bigger business problems than just implementing software. We understand the process not just the system.

Stoltenberg Consulting behaves differently, simplifying health care technology decisions by

- ◆ listening – aligning client needs with the right consultants
- ◆ evaluating those needs and recommending solutions and options – whether technology, process, staffing and/or systems – consistently proactive on the client's behalf
- ◆ providing vendor assessment and selection support – always taking ownership in client outcomes

Stoltenberg Consulting's team then provides strategic, comprehensive, tailor-made guidance and on-site support to maximize the system, applying application and process redesign expertise from our bench strength. Our flexible, results-based contracts focus on the client and your goals – maximum productivity to increase revenue and improve patient care.

Let our expert team of consultants – averaging more than 15 years of hands-on health care experience – simplify health care technology for you!

Denver Health - Eight clinic network of family health centers and twelve clinic network of school-based health centers.

About the CLIENT...

While some residents may be drawn to Denver, Colorado for the snow-capped mountains and typically cool weather, the city also boasts a health system in which all full-time physicians are faculty members of the local University of Colorado School of Medicine. These physicians teach medical interns and residents in 28 different specialties and conduct research that improves patient outcomes at Denver Health and around the world.

In addition, in the last 10 years, Denver Health has provided more than \$1.4 billion in care for the uninsured, constituting 42 percent of all un-sponsored care provided in metropolitan Denver and nearly 30 percent in the state. Denver Health Medical Center (DHHA), the healthcare system's main hospital, has the capacity to provide care for up to 500 beds and is home to the Denver area's only Level 1 academic trauma center, Rocky Mountain Regional Level 1 Trauma Center.

About the CHALLENGE...

With such a large system to manage, the DHHA system administrator's workload was increasing every day. To help ease his project load, Denver health brought in the expertise of Pittsburgh-based Stoltenberg Consulting. Stoltenberg creates an environment for success by working with healthcare organizations such as Denver Health to provide a variety of services including project management, implementation support and integration between systems.

One of the first issues Stoltenberg noticed at DHHA was the unnecessary complexity of the hospital's appointment scheduling system. End users of DHHA's scheduling software, SCI Solutions, were taking between two and five minutes to book most patient appointments, which was in direct correlation with the complexity of the setup of the application with which they were scheduling. The software being used was not functioning anywhere near its capability, and the scheduling staff at the DHHA clinics were struggling to keep up with the high volume of appointments needed to be booked each day.

Also, DHHA's system administrator was receiving an average of four to five share point/ticket items daily. With each item, he would spend approximately four hours researching how to make the appropriate changes in the software code, resulting in not only in the reduction of productivity for him but that of the entire facility. Though DHHA at first only planned on changing the number of appointments scheduled, the Stoltenberg consultants, who specialize in SCI Solutions software, suggested also changing the setup of the way they were scheduled.
